| Day 6 | **Mini-Lesson:**  
In whole group, look at the bug PowerPoint again. Ask the students to turn to a math buddy to explain where they see math. What connections can you make? 

Explain to the students how they will continue to add attributes to their bugs. This time they can use construction paper, markers, and crayons. 

Allow them to count the dots. This number will represent their bugs' age. Allow students to write the age down on their bugs. 

Play Bug Song. Allow students to dance around the room to the bug song. |  
What math skills are involved in this task?  
What am I assuming that students know how to do within this task?  
How can I differentiate this task to make it easier or more challenging?  
How are the students counting their dots? What does this tell me about each child? |
Guided Math Week 2 Lesson Plans

**AKS:**

10.NBT.1 count, read, write and order numerals within 120 regardless of beginning number
11.NBT.1 represent the number of objects in a set by a written numeral

<table>
<thead>
<tr>
<th>Guided Instruction:</th>
<th></th>
</tr>
</thead>
<tbody>
<tr>
<td>Introduce seatwork – explain how they will work on math practice sheets. Show how the folders work and where they place their work.</td>
<td></td>
</tr>
<tr>
<td>Allow students to work on ten-frame practice sheet with their groups. Let them practice with the folders.</td>
<td></td>
</tr>
<tr>
<td>Give each child an anchor paper workbook, the Harcourt practice book.</td>
<td></td>
</tr>
</tbody>
</table>

What are the students' reactions to anchor papers?

<tr>
<td>Enable the students to flip through their anchor papers and work on a page.</td>
<td></td>
</tr>
</tbody>
</table>

**Summarizing:**

**Number Talks** - Explain how we will be doing another number talk.

Review how Number Talks are where we look at numbers and explain our math thinking and the strategies we use to see the numbers. When you know the number, you put a thumbs up on your heart, if you see it more than one way, you show with the numbers on your fingers. For example,

- **How are the students communicating their math thinking during number talks?**
- **Am I reviewing my expectations and the flow of number talks successfully to ensure enhanced learning?**

if you saw the number 8, three ways, you would hold up a three by your heart. Review desired behaviors. We listen with hands down to what our friends say. If someone saw it the same way, then the students to the sign language symbol for me too. The limits shouting out. Always record students’ thinking on chart paper to post in the room (Parrish, 2010).

### Guided Math Week 2 Lesson Plans

**AKS:**

10.NBT.1 count, read, write and order numerals within 120 regardless of beginning number
11.NBT.1 represent the number of objects in a set by a written numeral

| 1. What questions do you have? |
| 2. What do you know? |
| 3. What do you think? |
| Have students discuss what they know. Use guiding questions. |

**Guided Instruction:**

Review the 4 rotations of math groups, teacher, seatwork, math tubs, and math journals. Have students practice correct and incorrect way, if needed. 2 groups per day. This lesson will be done on day 10 with 2 new groups.

**Teacher group:** Play the ten-frame game Park Your Car. Have students roll dot cube and park that many cars on their own ten frames. This game can be added as a math tub after everyone has played it with you.

**Seatwork:** Work on number sense paper pencil activities. Be sure to differentiate this as needed.

**Math Journals:** Solve the problem: 4 circles. 4 more circles. How many total? Be sure to differentiate this problem as needed.

**Suggestion:** Do not ask students questions that you already know the answers to. For example: How many is 50 + 50? instead use: How did you solve 50 + 50?

Four types of questions:
- questions that help students get started
- questions that help students get unstuck
- questions that help students check their work
- questions that help students go deeper

How are the students moving around the room? Are they staying in one spot?

## Guided Math Week 2 Lesson Plans

### AKS:
- 10.NBT.1: count, read, write and order numerals within 120 regardless of beginning number
- 11.NBT.1: represent the number of objects in a set by a written numeral

### Math Tubs:
Free exploration. Students need time to free explore with manipulatives before they are expected to use them mathematically.

### Summarizing:
Have the students complete the missing numbers on a 50s chart. Let them use whatever tools they need to complete this task. Take up as an assessment.

### What conversations are happening around the room?

### Day 10

#### Mini-Lesson:
DBQ - Do a DBQ (Document Based Questions) using a picture of the bug. Guide the students by referencing the Number Talks in calendar. Discuss math language and how do you look at a photograph and observe math.

4. What questions do you have?
5. What do you know?
6. What do you think?

Extend the discussion from yesterday and have students discuss what they know. Use guiding questions.

#### Guided Instruction:
Review the 4 rotations of math groups, teacher, seatwork, math tubs, and math journals. Have students practice correct and incorrect way.

#### How can you look at a photograph and ask a math question?

**Questioning Guide Suggestion:** Do not ask students questions that you already know the answers to. For example: How many is 50 + 50?...instead use... How did you solve 50 + 50?

Four types of questions:
- questions that help

if needed. 2 groups per day. This lesson will be done on day 10 with 2 new groups.
Teacher group: Play the ten-frame game Park Your Car. Have students roll dot cube and park that many cars on their own ten frames. This game can be added as a math tub after everyone has played it with you.

Seatwork: Work on number sense paper pencil activities. Be sure to differentiate this as needed.
Math Journals: Solve the problem: 4 circles. 4 more circles. How many total? Be sure to differentiate this problem as needed.

Math Tubs: Free exploration. Students need time to free explore with manipulatives before they are expected to use them mathematically.

Summarizing:
Students write, draw, and color to demonstrate their new learning for the week. Students will turn to a math buddy to share their thinking. Pick a few students to share their math journals in the math journal share chair.

students get started
-questions that help students get unstuck
-questions that help students check their work

What conversations are happening around the room?

How are the students' number sense skills building?

What can I do to prepare and plan for week 3?
